

CANONIC RELATION BETWEEN MORPHOLOGICAL DIMENSIONS AND SITUATIONAL-MOTION ABILITIES WITH YOUNG HANDBALL PLAYERS

Abstract

In order to get more complete theoretical pieces of knowledge necessary for practical needs in the sport of handball in Bosnia and Herzegovina where the selection of some future top handball players is made out of the population which had a noticable stoppage in development due to war situation, the aim of this survey is to look for some complex answers on the subject of interrelationship between morphological dimensions and situational-motion abilities being conditions for their integral development and for the factors which provide preconditions for development and improvement of the top new generation for handball.

Key words: handball, morphological dimensions, situational-motion abilities
